

ABSTRACT

A system for management of quotations includes a database (14), an application server (12), and a number of client computer (10) located in different places. The database (14) is used to store relevant information. The application server (12) is used to confirm quoted price and generate a quotation. The application server (12) includes an information maintaining module (21), a standard price confirming module (22), a contract price confirming module (23), a quote price confirming module (24), and a quotation generating module (25). The client computer (10) is used for users to access the application server (12). A related method is also provided.
